

Phishing Detection

Spot fake emails, SMS, and websites before they steal your data

నకిలీ ఈమెయిల్, ఎస్ఎమ్ఎస్, వెబ్సైట్లను ముందుగానే గుర్తించండి

Phishing is the use of fake messages, websites, and calls that imitate trusted brands — banks, courier companies, government, employers — to trick you into revealing passwords, OTPs, card numbers, or installing malware. One careless click can cost months of savings.

RED FLAGS BELOW —
MEMORISE THEM

The 7 Red Flags — S · C · A · M · P · E · R

Red flag	What to look for
S Sense of urgency	"Act in 2 hours or your account is blocked." Real institutions give clear timelines and never threaten.
C Conflicting sender	Email from "support@hdfc-secure-update.com" instead of "@hdfcbank.com". Hover to see the real address.
A Asks for secrets	Requests OTP, PIN, password, CVV, full card number, or KYC documents over chat or call.
M Misspellings, bad grammar	Genuine corporate writing is proofread. Awkward English, wrong logos, stretched images = warning.
P Prizes too good to be true	"You won ₹25 lakh in KBC lottery." If you didn't enter, you didn't win.
E Embedded suspicious links	bit.ly, tinyurl, or odd domains. Long-press to preview before tapping.
R Requests unusual actions	"Install AnyDesk so I can fix it" or "Pay a small fee to release your parcel." Never.

Anatomy of a Phishing SMS

SAMPLE FRAUD SMS

Dear customer, your SBI account will be **BLOCKED TODAY**. Update KYC immediately at <http://sbi-kyc-verify.in/login> or call **+91-9XXXXXXX**. — SBI Team

Phishing Detection

Across every channel — and what to do if you clicked

ప్రతి మాధ్యమంలో — క్లిక్ చేసిన తర్వాత ఏం చేయాలి

Why that SMS is fake. (1) SBI never sends links in SMS. (2) Real domain is **onlinesbi.sbi**, not "sbi-kyc-verify.in". (3) "Blocked today" creates panic — a red flag. (4) Bank helplines are short codes, not random mobile numbers.

Phishing Across Channels

Channel	Common lure	Defence
Email	Fake invoices, password resets, job offers	Hover the sender; never click; visit the company via its official site.
SMS (Smishing)	KYC, parcel, electricity disconnection	Open the official app instead — banks never send links.
WhatsApp	Prize forwards, fake bank assistant, paid tasks	Block & report; verify with the brand's official handle.
Voice (Vishing)	Bank, police, courier, electricity inspector	Hang up; call the number printed on your card or bill.
Fake websites	Look-alike login pages, e-commerce clones	Type URLs by hand; check padlock and spelling carefully.
QR code (Quishing)	Sticker placed over a genuine merchant QR	Verify the shop name shown by the app before tapping pay.

If You Already Clicked

- Disconnect from the internet immediately.
- Run a Play-Protect scan and uninstall any newly installed app.
- Change passwords for email, banking, and UPI from a different, trusted device.
- Tell your bank to freeze the card and UPI.
- Report at **cybercrime.gov.in** and call **1930** the same day.
